# Other Experience

## **Director of Technology, Massachusetts Academy of Nutrition and Dietetics, July 2017- June 2019**

- Request quarterly content updates from other board members and add the information to the website in a clear, creative manner to ensure members can easily access up-to-date information relevant to their job
- Input candidate information and implement the electronic voting process on the website annually
- Create and implement a yearly work plan and budget for the Technology/ website position

## **Student Dietitian, The Barton Center for Diabetes Education, North Oxford, MA, summer 2012**

- Worked independently to create daily menus with carbohydrate counts and serving sizes
- Aided kitchen staff in altering menu items to accommodate campers with food allergies
- Designed and led education sessions about creating balanced meals and snacks for children ages 6-16 years
- Created an orientation guidebook for the Student Dietitian position

# Projects

## **Registered Dietitian and UX Designer, UMass Memorial Medical Center, November 2019-present**

As a clinician who cares for patient on medical units with chronic pancreatitis patients, I joined an interdisciplinary team with other dietitians, doctors and administrators to develop education materials for patients managing chronic pancreatitis. My role was to assist in compiling important nutrition information for the booklet. I developed a patient user research survey to identify what patients would want out of this new education material. I am also currently in charge of compiling the interdisciplinary information each team provides into the booklet and designing its layout for printing.
